

## AUTOMATIC UNITS

for tip profiling machine for  
bassoon  
for profiling machine for oboe

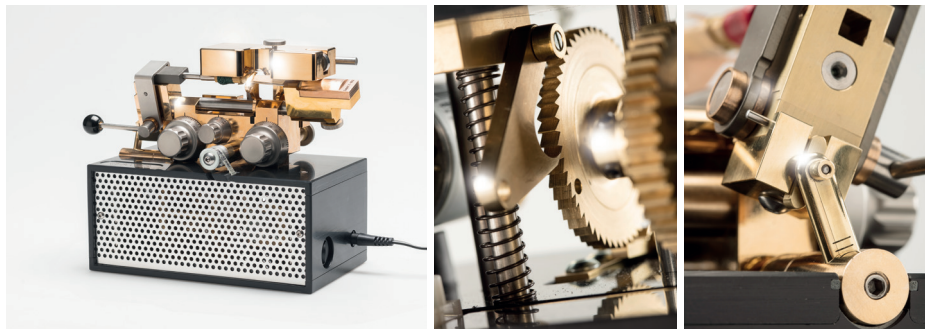

www.oboerohr.ch

Automatically coordinated regular movements of the axis and the sledge allow for highest exactness of the scrape. Amazing precision - high-grade materials and durability.

*Stressfree  
reedmaking!*

10 YEARS  
 BUCHER

The mechanical inner workings of the unit are marked by the precision in the manufacture, high-grade materials and durability known from the Bucher (tip) profiling machines.

- **Without any effort on your side the required reed will be scraped**
- **The automatic unit stops at the end of the scraping cycle**
- **Regular coordinated movements of the axis and the sledge give highest exactness and smoothness of the scrape**
- **All adjustment facilities of the manual operation are available**

**With little effort** you remove the profiling machine from its box and then attach it to the automatic unit. After having connected the 12 Volt Power Supply, you press **the toggle switch and the scraping process begins**. A wooden box allows to transport the machine on its automatic unit.
