

**TIP PROFILING  
MACHINE FOR  
BASSOON REEDS**

[www.oboerohr.ch](http://www.oboerohr.ch)

Precise scraping of highest quality, consistent reproduction with little time necessary. Length of the scrape up to 28mm. Simple, user-friendly operation: A mature product of years of development.

*Stressfree  
reedmaking!*

 10 YEARS  
**BUCHER**

In the high and low registers the reeds have a better response and allow for more dynamic due to the perfect scraping. After a little conversion of the Bucher tip profiling machine - with exchange of the main axis - you can also scrape the reeds for historical bassoons and contrabassoon.

- **High precision scraping, not attainable by hand**
- **No manual corrections necessary**
- **Length of the scrape: up to the base (maximal length 28mm)**
- **Consistent reproduction of desired scrape**
- **Time-saving and easy to operate**

**The thickness is variable in hundredths of millimetres and the length of the scrape is also adjustable.** We offer standard templates, also **personal templates, crafted individually according to your reed.** The rescraping of defined areas is made possible with precise and easy-to-change correction templates. More than 500 reeds can be scraped with the round knife. The knife replacement doesn't require calibration.

Further Bucher products:  
Profiling machine for all types of oboes  
Automatic units for both machines

*Stressfree  
reedmaking!*
