

# Templates for tip profiling machine for bassoon

Templates are available for bassoon reeds and - with the extension of the system to the profiler - for historical bassoons and contrabassoon.

Our **standard templates** are in themselves harmonious and balanced. You achieve maximum profit from the machine with your own **personal template**, crafted individually according to your ideal reed. Your personal scrape will be constantly reproduced.

The templates consist of a hard bronze with phosphorus and have a constant thickness reference and perfect symmetry. They are rapidly and accurately interchangeable.

Based on one scraping form, following templates are freely selectable:

## Original templates

**Original** Contains the specified values of the template.

**PLUS** Is based on the original. The heart is marked, the increase more accentuated, especially in the central and lateral areas. The back third of the scrape is about 6 hundredths of millimetres thicker than the original.

## Correction templates

After scraping with an original template, defined areas can be scraped. The coloured part of the logo indicates the section being scraped:

violet the tip, in a slightly arched shape

blue the attack (tip and edges)

green the sides of the scrape

yellow attack in w-form

red channels (more flexibility by omitting the center and the sides)

*Stressfree  
reedmaking!*
