

# Templates for profiling machine for all types of oboes

After a simple change of the template you can scrape the reeds for oboe, cor anglais, oboe d'amore, baritone oboe, baroque, classical and Vienna-oboe as well as reeds with American scrape.

Our **standard templates** are in themselves harmonious and balanced. You achieve maximum profit from the machine with your own **personal template**, crafted individually according to your ideal reed. Your personal scrape will be constantly reproduced.

The template includes the original segment and four additional segments as well as an adjustable crown:

## Original segments

- Original Contains the specified values of the template.
- PLUS Is based on the original. The heart is marked, the increase more accentuated, especially in the central and lateral areas. The base of the scrape is about 3 hundredths of millimetres thicker than the original.
- minus Is based on the original. The increase is less accentuated, especially in the central and lateral areas. The base of the scrape is about 3 hundredths of millimetres thinner than the original.

## Correction segments

After scraping with an original segment, defined areas can be scraped. The coloured part of the logo indicates the section being scraped:

-  violet the tip in an arched shape
-  orange the tip in the shape of an obtuse angle
-  blue the attack (tip and edges)
-  green the sides of the scrape
-  olive all the scrape, except the center crest
-  red all the scrape, except the heart
- Heart the heart (in American scrape)
-  yellow the „windows“ (in American scrape)

*Stressfree reedmaking!*

## Segment combinations

Type E: Example for template with center crest and obtuse angle.

Type X: Combination and placement from original segments and correction segments can be selected individually (e.g. different originals).

## The crown

The adjustable crown limits the length of the scrape and causes the form of the base of the scrape.

U-shaped W-shaped
